IBM
Week 4 Data Science Project

Introduction
This is an assignment for the IBM Data Science Professional Certificate. In this assignment will try to find out how popular the Greek restaurants are in Toronto city. Based on the results we will understand if Greek flavors are among the ones that the residents of Toronto liked. It will be helpful to understand from business perspective if someone wants to start its own restaurant there.

Business Problem
A suitable location for someone to create a new Greek restaurant in Town.

Target Audience
A businessman who thinks to expand his operations in Canada.

Data
We will use the

- List of neighborhoods in Toronto via Wikipedia
- Longitude and Latitude via Geocoder package
- Venue data via Foursquare API
